

PrintBOS

by **CONSIST**

Innovative Enterprise Output Solutions for
design, management and distribution

- ▶ Cross-enterprise dynamic forms and output solution
- ▶ Compliance solution for transparency laws in finance and insurance industries
- ▶ Integration of multiple data sources into dynamic forms and outputs
- ▶ Major savings on pre-printed paper
- ▶ Reduction in the number of printers
- ▶ Unified branding on all business output - mail, fax, print
- ▶ Total flexibility for dynamic handling of changes
- ▶ Multi-channel output management: print, e-mail, fax, SMS
- ▶ Full integration with ERP, CRM, Billing, Accounting and other enterprise applications
- ▶ Self-learning intuitive interfaces
- ▶ Compatible with your current equipment

PrintBOS

See what our customers have to say...

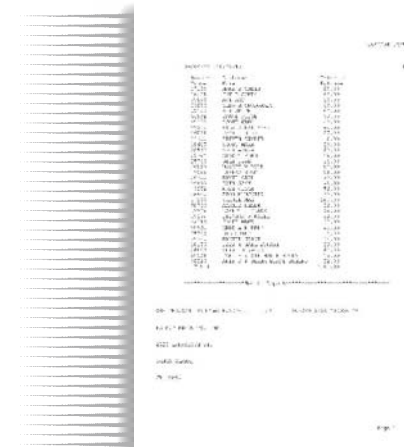

“

We eliminated pre-printed stationery in less than 5 months... Add to that a boost in productivity, since users no longer have to change stationery, can make changes to documents instantly, and benefit from much faster output.

Jon Tarr
IT Manager

Kverneland - The world's largest supplier of implements to the farming and viticulture community

Discovering PrintBOS

PrintBOS is fast becoming the standard for design and output management. Why? The reasons are simple: it delivers a faster ROI than clients imagined, while transforming document design, output, distribution and archiving into significantly more efficient and marketing-oriented processes.

Enabling enterprises to customise and deliver information to multiple digital destinations, PrintBOS accommodates any combination of host environments.

PrintBOS is so simple and easy to use that employees feel right at home with the “look and feel” of Windows, right mouse click function and floating windows. Users create templates and change them just as quickly. All corporate documents, in addition to their basic function, can now integrate the corporate brand, look & feel, strengthening brand awareness & recognition.

As for raw data files, they are dragged and dropped onto the design template—no data mapping or modifications needed. A powerful script language ensures outstanding flexibility in document appearance, routing specifications and integration of several data sources from external applications into one template.

Our customers use PrintBOS for a variety of documents - from forms, reports, barcodes and labels to faxes and cheques. PrintBOS transparently intercepts these output jobs and applies the correct graphic formatting to create the customer's preferred output. Time and labor-saving, PrintBOS allows employees to focus on more added-value tasks than output jobs.

“We chose PrintBOS because it had the output modules we were searching for” reports a satisfied customer. PrintBOS can analyse, design, manage, and deliver hardcopy, email, SMS or fax formats while saving the enterprise time & money.

“

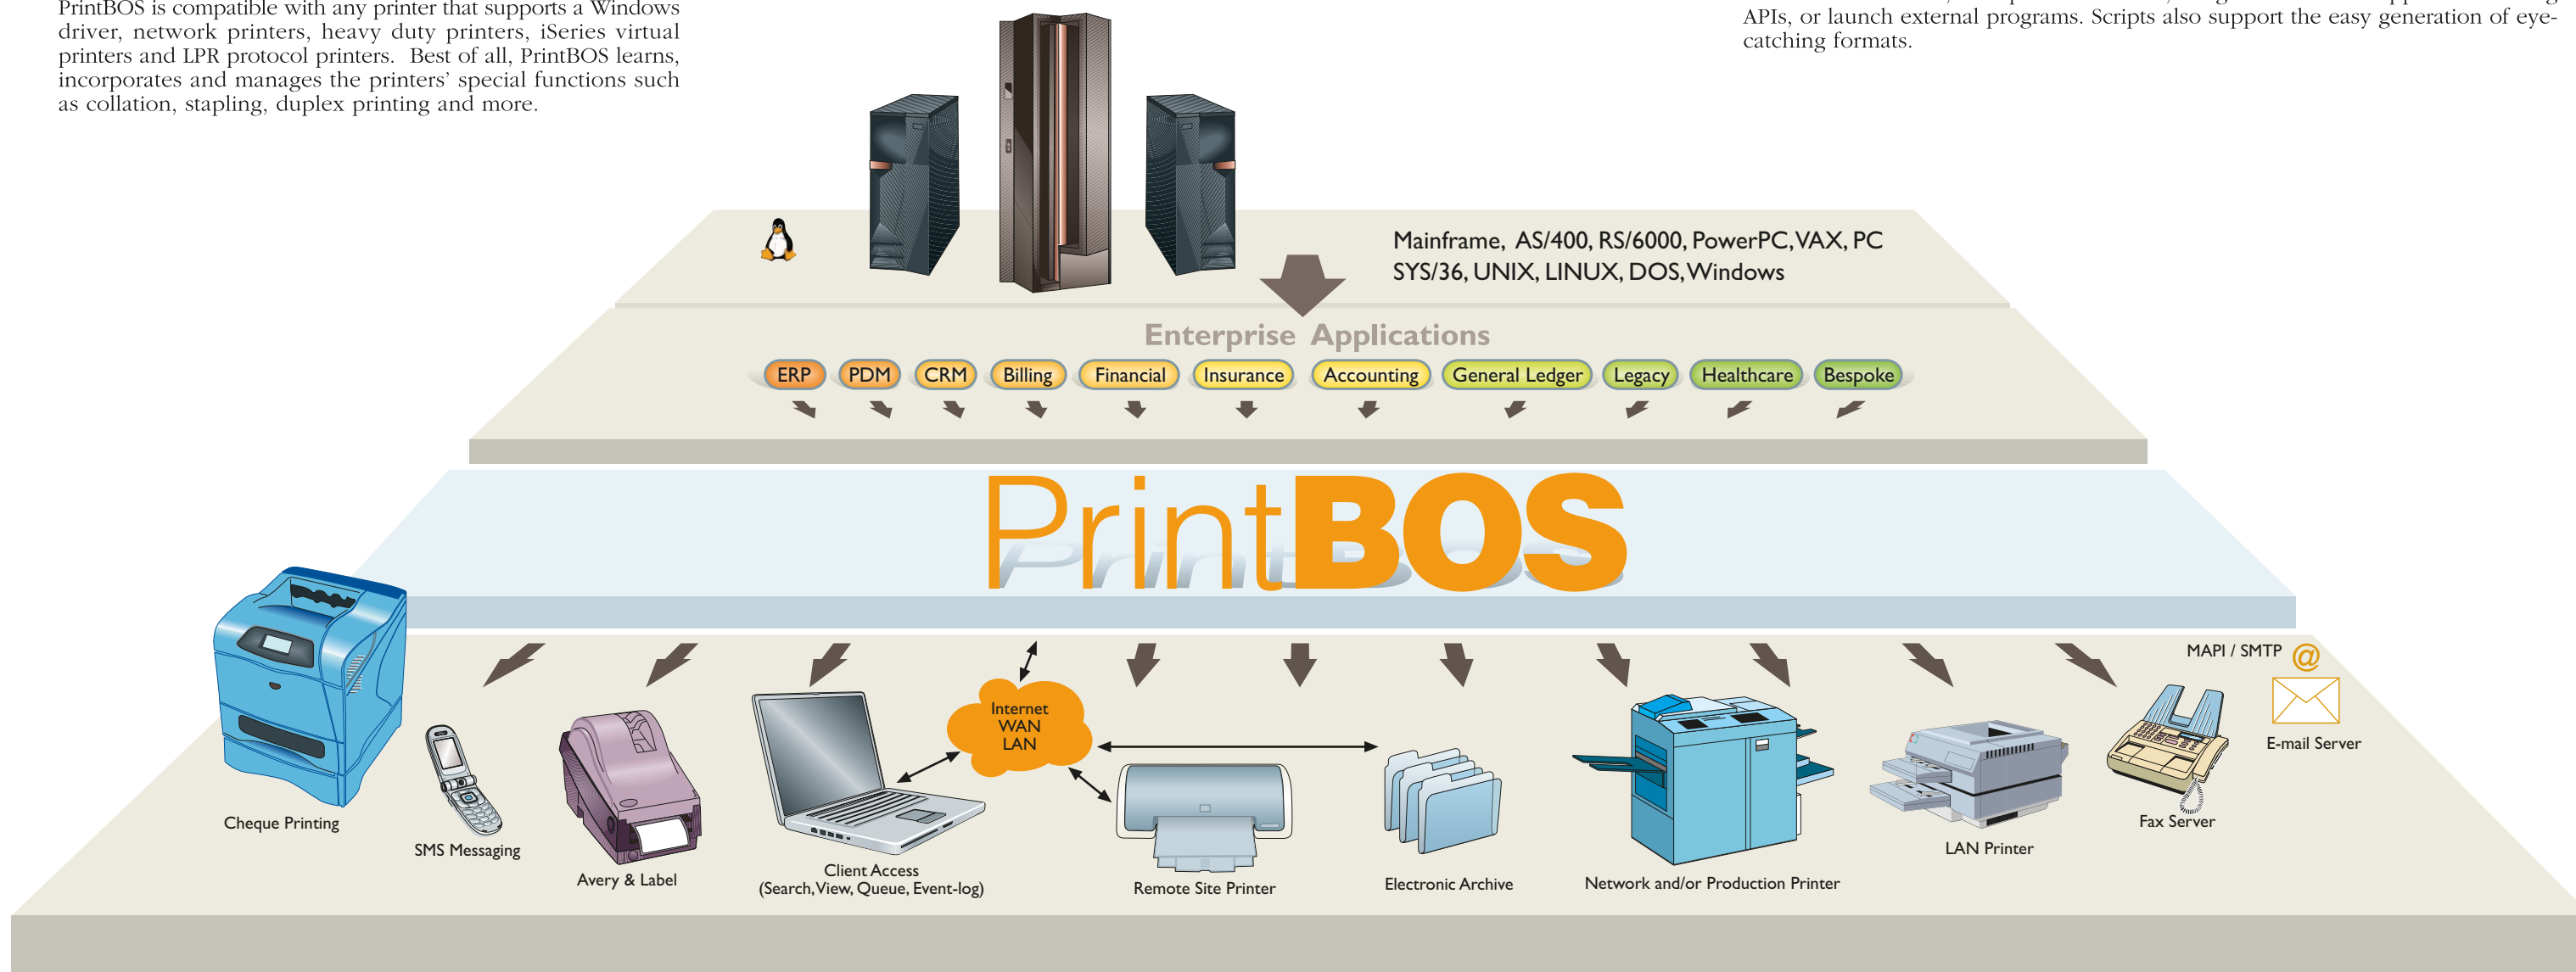

In 12 months we have already seen an ROI on the costs of pre-printed stationary and postage...and we've increased productivity through auto-archiving of documents, conversions to PDF format, filing and storing. We can now add advertisements to the documents, making the forms double as marketing tools.

Printing that makes the most of your equipment

PrintBOS is compatible with any printer that supports a Windows driver, network printers, heavy duty printers, iSeries virtual printers and LPR protocol printers. Best of all, PrintBOS learns, incorporates and manages the printers' special functions such as collation, stapling, duplex printing and more.

Always Available Archiving on the Web

Print files are stored in the PrintBOS archive in PDF, TIFF, WMF, EMF, BMP, PCX format. During document design, the user selects data fields, and names them, ensuring easy access. The Archive Server can be accessed using Internet Explorer, and has advanced database search capabilities.

Script Language- for Value Added Functionality

PrintBOS's script language delivers the ultimate in flexibility for document appearance and routing specifications. Format options and report designation can be controlled via customised trigger-based scripts. Employing scripts, users indicate multiple data sources for the form, multiple destinations, integrate additional applications using APIs, or launch external programs. Scripts also support the easy generation of eye-catching formats.

Distribution that gets directly to the addressee

e-mail: PrintBOS sends email via any MAPI/SMTP-compliant e-mail server. Formatted print jobs are sent as attachments in PDF, TIF, WMF, EMF, JPG, BMP or PCX. And users can always get confirmation that their e-mail has been delivered.

Fax: PrintBOS sends faxes through fax servers such as FACSys, ZetaFax, FAXport and WinFax Pro. Right Fax, Message Manager, Graphic elements, signature pages and cover page attachments are inserted automatically once the fax template has been created.

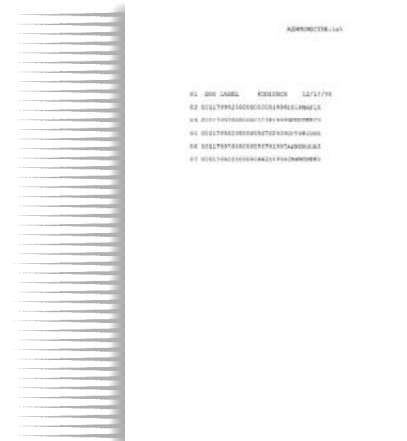

SMS: PrintBOS currently supports GSM and CDMA. Adaptation to other cellular formats is available.

“

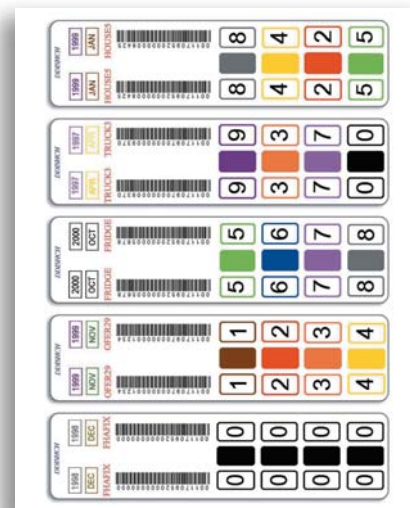

The installation of PrintBOS did not require any additional equipment... professional documents can be produced directly from the IBM iSeries... we can now direct reports... to use email...or directly to a fax router. This is decidedly more efficient.

Robert Cleeve
Systems Manager

PrintBOS for ERP

PrintBOS decisively overcomes the printing and form design challenges of implementing lengthy, complicated projects supported by ERP. Using PrintBOS for SAP, Oracle Applications, PeopleSoft, JD Edwards, GEAC System 21 or any other ERP system, customers easily implement design and on-going changes for comprehensive output management. Moreover, PrintBOS supports different languages and fonts, even those not installed on the printer, and integrates with other enterprise software systems.

Compatible with XSF, XML and RDI multi-data formats, PrintBOS recognises and processes hierarchies.

ERP to barcode transformation is easily implemented, for either electronic or hardcopy output. As with every PrintBOS feature, there are virtually no limitations. Bar-coded forms can be printed even on printers that do not support barcode output.

Take the case of a leading telecom developer and manufacturer. They integrated PDM and SAP outputs via PrintBOS to support integrated invoice design and cheque printing. Invoices typically contain items sold, with their part number and description of the part and its function.

This customer is one of a growing number of customers that are discovering that PrintBOS can be leveraged significantly to deliver measurable benefits in output management.

“

PrintBOS meets all the requirements of the 'What you need to know' slogan that appears on Office Depot's labels. We use PrintBOS for label printing, sales reps labels, output of procurement orders, e-mail campaigns and more. In the next stage, we will also use PrintBOS for Point Of Sale advertising.
